MEMORANDUM CIRCULAR #90-07

To: Building Owners/Administrators

The Board, concerned with the increasing frequency of non-collection of building garbage and other waste matters looked into the contributory causes of such service lapses. Most significant of these causes are:

1. Closing down of nearby dumpsites;
2. Truck ban on main thoroughfares;
3. Buildings' internal garbage disposal and storage procedures.

Although Items "1" and "2" are outside the control of MACEA, coordination with government agencies concerned is being maintained with the view of seeking some relief for our collectors. The Board herewith is addressing directly Item "3".

To insure a tolerable degree of sanitation and cleanliness within the MACEA area of responsibility especially during periods when collection of building garbage and trash is delayed, the MACEA Board is announcing the adoption of measures relating to buildings' internal garbage and waste disposal procedures as follows:

1. Packaging garbage and trash in appropriate containers prior to storage at buildings' garbage chutes, bins, storage drums or other types of depositories. We are recommending the use of any type of used or unused disposable plastic bags to facilitate handling and to prevent littering of waste matters by scavengers.
2. Debris and other solid waste resulting from renovations and/or repairs in the buildings be stored separately from the buildings' daily garbage or trash output;
3. Tree/plant parts resulting from trimmings or felled by winds and other causes should likewise be stored separately from the the daily garbage and other waste matters;
4. Collection and hauling of item "2" will be on a special hauling and discounted arrangement with collection contractors;
5. Collection and hauling of item "3" will be will be along with the buildings' daily garbage and other trash.
6. Buildings without in-building garbage holding facilities are urged to construct within respective property boundaries structures, preferably concrete and adequately secured against scavengers, for use as holding facility for packaged garbage and waste matters prior to pick up by authorized collectors.

Above regulations are supplementary to existing rules on buildings' garbage disposal and storage as detailed in earlier memoranda.

The cooperation of all concerned is enjoined.
